NG-PON2 ONU Small Form Factor 10Gb/s (XFP)

PAN2XUXSSA3C

Revision 2

Product Description:

The PAN2XUXSSA3C transceiver is a hot-pluggable high-performance module for single-fiber communication and is intended for NG-PON2 ONU application in an XFP housing. It can tune and operate in full 4 channels/wavelengths, according to ITU G.989.2, with 9.95328Gbps in both continuous-mode downstream and burst-mode upstream, and supports distances up to 20 km. The module transmitter can be controlled by the LVTTTL TX_BEN and TX_MOD_DIS functions, and the receiver has LVTTTL RX_LOS signaling.

This module also provides digital diagnostic information of its operating conditions and status, including module temperature, transmitter and receiver optical power and supply voltage according to ITU G989.2 recommendation.

Features:

- 10 Gbit/s laser diode
- 10 Gbit/s high-sensitive APD-TIA
- NG-PON2 compliant
- Class 3 tuning time
- C-Temp case temperature
- SC/APC interface

Applications:

- NG-PON2
- FTTH
- WDM systems
